

Mipa PU 215 2K-PU-HS-Einschichtlack

Powerful. Efficient. Future-proof.

Mipa PU 215 is an energy-efficient, high-performance coating system that has been specially developed for maximum durability and economical processes. Short drying and processing times with low energy consumption enable a sustainable reduction in coating costs without compromising on quality and performance.

- VOC < 420 g/l
- Fast drying
- Direct adhesion to Fe, Al and Zn
- Active corrosion protection
- High UV and weather resistance
- High scratch and impact resistance
- Single-layer system reduces process steps and throughput times

Mipa PU 215 2K-PU-HS-Einschichtlack

Maximum flexibility in application

Thanks to the wide selection of hardeners and thinner settings, Mipa PU 215 can be optimally adapted to component geometry, surface size and process requirements:

- Efficient application on large areas using Airmix technology
- Precise application on small areas with gravity spray gun application

The result: reproducible quality, high process reliability and maximum efficiency in production.

Appearance meets performance

- Wide variety of gloss levels
- Huge range of colours via Pro Mix® Industry

All gloss levels available

- PU 215-10 matt
- PU 215-30 satin matt
- PU 215-50 semi-gloss
- PU 215-80 glossy
- PU 215-90 high-gloss
